

LO-COG® DC Servo Motors

Pittman brand LO-COG® brush-commutated DC motors offer smooth, quiet operation and long life. Armatures are skewed to minimize magnetic cogging, even at low speeds, and windings are resin impregnated for greater reliability in incremental motion applications. An innovative cartridge brush assembly reduces audible and electrical noise and significantly improves brush life by maintaining optimum brush force throughout the life of the motor. For precision motor control, Hewlett-Packard® optical encoders are available in 2 or 3 channel versions with several CPR ranges to meet your position, velocity and direction feedback needs.

Construction

- 2 pole permanent magnet stators are constructed of ceramic magnets enclosed in heavy-gauge steel return rings
- Diamond turned commutators ensure maximum brush life
- Standard copper graphite brushes
- Precision ground hardened stainless steel shafts
- Silicon-steel laminations
- Self-aligning, sintered bronze bearings

Options

- Custom cables
- Multiple shaft configurations
- Shaft-mounted pulleys and gears
